

ÅAC Microtec selected by commercial customer for standard product

2018-11-07 ÅAC Microtec AB

ÅAC has won an order on Sirius avionics subsystems from a commercial customer. The subsystems valued at approximately 1 MSEK, will be delivered in December this year proving ÅAC's ability to deliver advanced systems on short notice.

The short time to delivery has been made possible by ÅAC's development of standardized and modularized subsystems tailored to the small satellite market. The order is evidence that the Sirius product range has been attractively positioned in the commercial space market since it comes from a new customer in Japan.

- *Our brand, high quality product range and short delivery times were catalysts in our ability to win this order. It shows that ÅAC is well equipped to compete in the commercial space market, says Iraklis Hatziathanasiou, VP Business Development.*

The Sirius avionics subsystems are responsible for managing vital functions of spacecraft and have been developed over the last three years. They are designed especially for use in nano and micro satellite platforms.
