Pressrelease

2021-01-21

Raytelligence – partner in the PICTA project Autumn Leaves for improved case detection in close care.

The Autumn Leaves project - improved fall detection in close care - will reduce time delays and increase the precision of the prehospital care process for the major societal problem of fall injuries. The project has already received funding from the Innovation Fund VGR. Now it is also clear that Sweden's innovation authority Vinnova also gives its support.

"The project creates the conditions to streamline medical procedures for a large and fragile group of patients. Vinnova's support means that we also have greater opportunities to shape an ecosystem for innovation in business and healthcare," says PICTA's program manager Hanna Maurin Söderholm.

"It is very gratifying that Raytelligence has been selected to strengthen the technology in the project, we already have case detection with alarm function in our latest release of the cloud-based sensor system EaZense," says CEO Klas Arvidson.
