# The first migraine patients undergo K.O.S treatment in Sweden

Clinics in Malmö and Solna in Sweden have now started treating migraine patients with Chordate Medical Holding AB's (publ) ("Chordate") K.O.S treatment. It is the first time K.O.S. treatment has been used to treat chronic migraines in regular clinical practice.

"The clinics see a great interest and many people seek the treatment spontaneously. Within a few days, our collaborating clinic in Gothenburg will also be able to offer K.O.S. treatment for chronic migraines.

"The work to establish sales in our selected markets in Europe continues, and the fact that we now have patients undergoing the treatment is very satisfactory," says Anders Weilandt, CEO of Chordate.

Chordate received CE marking of the K.O.S method for treatment of chronic migraines in May 2021. The CE marking means that K.O.S meets the clinical efficacy and safety requirements for chronic migraines in the European Medical Devices Directive. This approval allows Chordate to commercialize migraine treatment freely within the EU, and now the first patients have started treatment in Sweden.
